

# Energy Saving Measures for LSTHS

Our school received funding from the 'Environment and Conservation Fund' and the 'Environmental Campaign Committee' in October 2013 to implement the plan: 'Love you school, save more energy'. These measures include:

1. T5 Fluorescent Fittings installed in the corridors and stairs.
2. 19 Grade 1 Energy Label Air Conditioners installed to decrease power consumption.
3. A heat shield coating on the second and fourth floor roof to decrease indoor temperature, which will decrease power consumption of air conditioners during summer.

The construction was completed successfully in January 2014. To further raise awareness of environmental protection, the School has invited Green Sense to hold a lecture about 'Global Warming and Green life' in April 2014. In addition, we have placed an Environmental Protection board in the school hall. Students can learn more about environmental protection by reading the information on the board.

We, the teachers and students of Li Sing Tai Hang School, are most grateful for the support from the 'Environment and Conservation Fund' and the 'Environmental Campaign Committee'.
